

CaptureGem Tokenomics

Version 1.0 | December 16, 2025

1. Executive Summary

CaptureGem (CAPGM) is the utility token powering the CaptureGem and Camtrove ecosystem—a next-generation suite of tools for adult content creation, archiving, and consumption. Built on the Solana blockchain, CAPGM is designed to empower creators, reward loyal users, and foster a sustainable, community-owned economy.

As of December 2025, the project has shifted to a "**Community First**" distribution model, allocating 75% of the total token supply directly to the platform's premium users via a tiered airdrop. This document outlines the technical utility, the economic model, and the distribution mechanics of the CAPGM token.

Important Note on Legacy Migration:

Please be aware that CAPGM is the official replacement for the project's previous ecosystem token. We discontinued the former token specifically to resolve trademark conflicts related to its ticker symbol. This transition to CAPGM ensures a secure, distinct, and compliant brand identity for the future of the platform.

2. Ecosystem Overview

The CAPGM token serves two primary platforms:

1. **CaptureGem:** A proprietary software application serving a vibrant community of premium members. It provides advanced tools to record content from popular cam sites (Chaturbate, Stripchat, MyFreeCams, CamSoda, etc.), allowing users to curate personal libraries and bridge the gap between public performance and private collections.
2. **Camtrove:** A partner platform for content hosting and discovery.

Our Mission:

- **Empower Creators:** Provide tools to monetize content and brand building with fair revenue splits.
- **Reward Loyalty:** Incentivize long-term platform usage through the CAPGM token.
- **Decentralize Ownership:** Ensure the network is owned primarily by its users, not just the developers.

3. Tokenomics: The Community Model

CAPGM rejects the complex, opaque allocations typical of modern crypto projects. We believe in a distribution model that is simple, transparent, and undeniably fair.

No Presale, No VCs, No Insiders:

There was no private presale, no venture capital funding rounds, and no early access for insiders. We bypassed the traditional fundraising model to ensure that no single entity could dominate the supply before the community arrived. Every token was either earned by the community or transparently allocated to the project's growth.

3.1 Supply Breakdown

- **Token Ticker:** CAPGM
- **Blockchain:** Solana (SOL)
- **Total Supply:** 1,000,000,000 (1 Billion)

Allocation Category	Amount (CAPGM)	Percentage	Notes
Community Airdrop	750,000,000	75%	Distributed to Premium Users (See Section 4)
Treasury & Dev	250,000,000	25%	Development and Liquidity

3.2 Sustainability & Holder Value

To ensure long-term value beyond the initial airdrop, CaptureGem employs a fee-sharing and discount model.

- **Fee Redistribution:** A portion of the platform fees generated from token trading activities is allocated directly to CAPGM token holders, via repurchasing tokens from the DEX and burning them. This aligns the success of the platform's economy with the rewards for its community.
- **Discounted Trading Fees:** While content trading supports multiple payment methods, users utilizing CAPGM for transactions receive significantly reduced platform fees, driving organic demand for the token.

3.3 Trading Availability

The CAPGM token is live and fully tradable on the Solana blockchain. We have established our primary liquidity on **Orca**, offering users a fast, low-fee trading experience.

- **Trade on Orca:** [Click here to trade CAPGM/SOL](#)
- **View Charts on DexScreener:** [Click here to view CAPGM charts](#)

4. The "Community First" Airdrop (December 2025)

The primary distribution event for CAPGM is the Loyalty Airdrop. This event rewards users based on their tenure as premium subscribers across both CaptureGem and Camtrove.

Snapshot Date: December 16, 2025
Distribution Pool: 750,000,000 CAPGM

4.1 Loyalty Tiers

We utilized three historical snapshot dates in 2025 to determine loyalty:

1. **April 6, 2025**
2. **August 16, 2025**
3. **December 16, 2025**

The amount of tokens received is calculated via a multiplier based on how many snapshots the user appears in:

Tier Name	Criteria	Reward Multiplier
Tier 3: The OG	Premium member during all 3 snapshots.	300% (3x Base Allocation)
Tier 2: The Veteran	Premium member during any 2 snapshots.	200% (2x Base Allocation)
Tier 1: The Recruit	Premium member on Dec 16 only .	100% (Standard Base Allocation)

4.2 Cross-Platform Eligibility & The Reservation Vault

- **Linked Accounts:** Users who have linked their CaptureGem and Camtrove accounts automatically receive the highest possible tier based on combined history.
- **Unlinked Camtrove Users:** If a user is Premium on Camtrove but has not created a CaptureGem account, their allocation is **not lost**. It is held in a **Reservation Vault**. These tokens are safe and cannot be claimed by others. **To claim, users must contact our support team via email or open a ticket on our official Discord server to manually redeem their tokens, as an automated claim mechanism is not currently available.** Please note: Unlinked users have strictly 3 months from the airdrop date to claim their reserved tokens. Any tokens remaining in the vault after this period will be permanently burned.

5. Token Utility

CAPGM is not a passive asset; it is the fuel for the ecosystem's economy.

5.1 For Users

- **Peer-to-Peer Content Trading:** Users can buy, sell, and trade content directly with one another. While payments can be made via various methods, using CAPGM entitles the

user to **reduced trading fees**.

- **Token-Based Storage & Marketplace:** We are exploring models where personal cloud storage limits are determined by a user's CAPGM holdings—the more you hold, the more you can store. Additionally, we plan to enable a decentralized marketplace where users can rent out their unused storage allocation or trade capacity with others.
- **Tipping:** Direct, borderless tipping to performers without high credit card processing fees.
- **PPV Unlocks:** Use CAPGM to purchase access to exclusive Pay-Per-View content, private recordings, and premium archives.
- **Governance:** Holders may vote on platform decisions, such as feature prioritization and fee structures.

5.2 For Creators

- **Content Monetization:** Creators can "lock" content behind a CAPGM paywall.
- **High Revenue Share:** Performers keep significantly more revenue (up to 50% on PPV) compared to traditional tube sites, thanks to blockchain efficiency.
- **Cashing Out:** Verified performers can redeem earned CAPGM for SOL or stablecoins via the platform's redemption gateway.

6. Roadmap: 2026 and Beyond

- **Phase 1: Distribution (Current)**
 - Execution of the 75% Community Airdrop.
 - Activation of the Reservation Vault for claiming tokens.
- **Phase 2: Economy Activation (Q1 2026)**
 - Launch of the Peer-to-Peer Content Trading Marketplace.
 - Implementation of the Fee Redistribution system for token holders.
 - Full integration of CAPGM payments for PPV content.
- **Phase 3: Decentralization (Late 2026)**
 - Introduction of DAO voting for token holders.
 - Exploration of decentralized hosting (IPFS) where the CaptureGem client acts as a storage node, and the launch of the **Storage Capacity Marketplace**.
 - **Continuous Improvement:** Ongoing exploration of additional technologies and protocols to further decentralize platform infrastructure, ensuring resilience and community ownership.

7. Risk Factors & Disclaimer

Not Financial Advice: CAPGM is a utility token intended for use within the CaptureGem ecosystem. It is not an investment vehicle, security, or stock. The value of digital assets is highly volatile.

Specific Risks:

- **Service Dependency:** CaptureGem relies on the technical architecture of third-party

cam sites. Changes to those sites may require updates to our software.

- **Regulatory Landscape:** The adult industry and cryptocurrency sectors are subject to complex legal regulations which vary by jurisdiction.
- **Banking Access:** Traditional finance often marginalizes adult industry platforms; CAPGM mitigates this by using crypto, but off-ramping to fiat may still be subject to banking restrictions.
